Household and Appliance Technology Section

„Everybody does the dishes differently - What about you?"

International study on manual dishwashing habits

We are looking for test persons, to do the dishes under scientific conditions.
The Household and Appliance Technology Section of the Institute of Agricultural Engineering at the University of Bonn investigates manual dishwashing habits within an international study. Therefore people from different countries around the world are going to wash dishes by hand. We are currently looking for participants from

Japan, Korea, USA, Canada, Australia, New Zealand and Gulf States:

Prerequisites:

- Minimum age: **18 years**
- Participants shouldn't be living in Germany for more than 2 – 3 years.
- Experience in doing the dishes by hand is required.

What you get out of it:
The good feeling of supporting a scientific study and **a reward of € 30** !

What needs to be done?

For every test run, typical household dishes are soiled with food in a standardized fashion. Test persons then do these dishes by hand. Each experiment takes about 2 hours.
During the test runs, the test persons are recorded on video in order to evaluate the manual dishwashing behaviour. Finally, participants are asked to complete a questionnaire about dishwashing.

Interested? Then please get in touch: **dishes@uni-bonn.de**
